

SiteParserBot

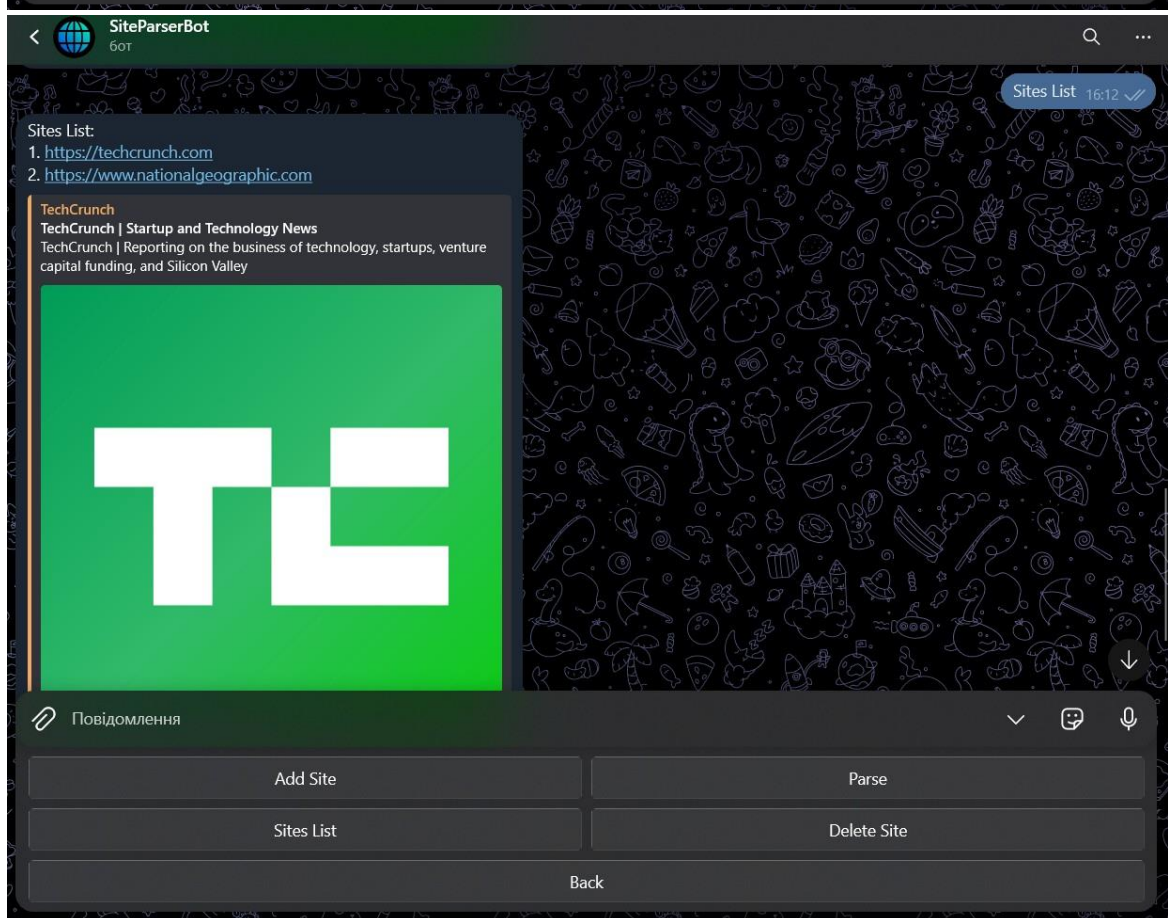

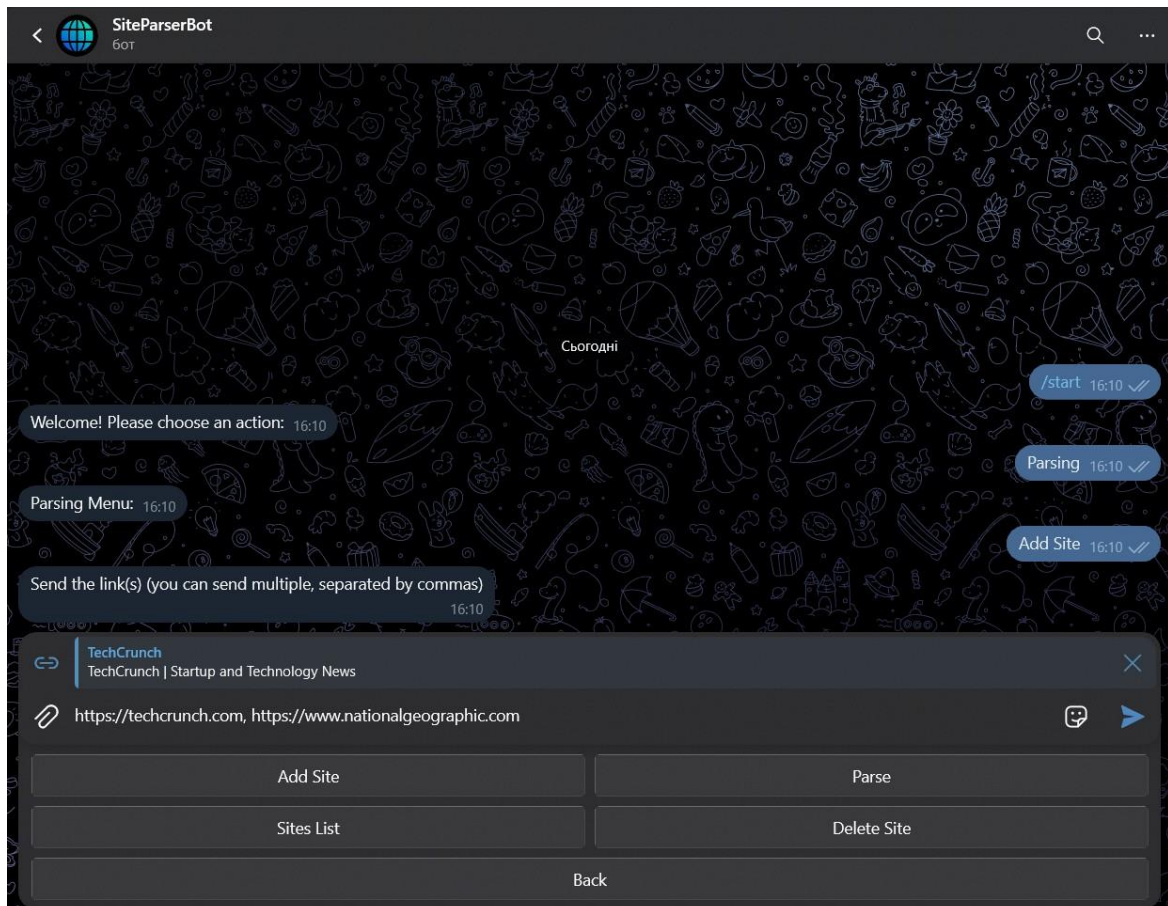

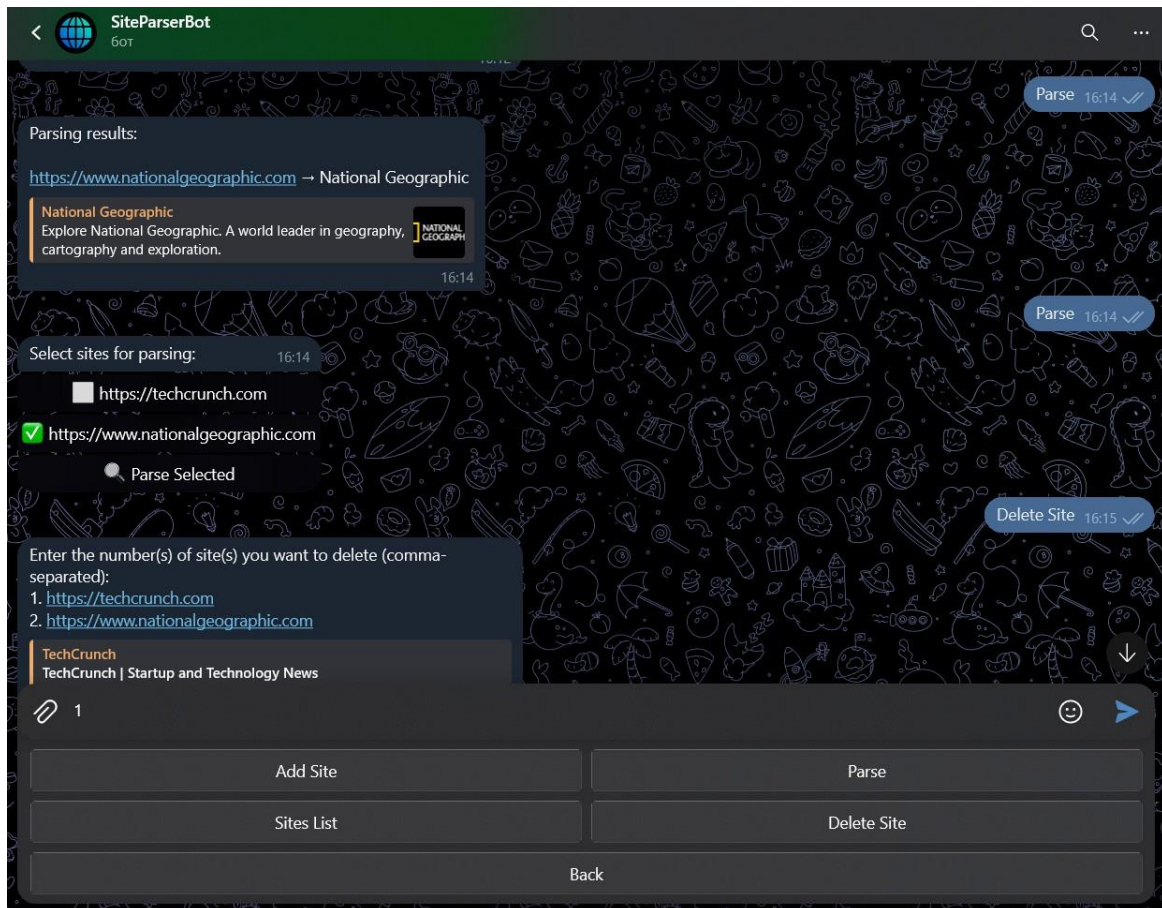

Main Menu

The main menu of the bot offers three core actions:

1. **Parse** – Manually parse the currently selected websites.
2. **Auto-parsing** – Configure automatic parsing based on custom time, days of the week, and repeat options.
3. **Export** – Export parsed data, time points, and site lists in a clean, structured PDF format.

This clear and minimal interface gives users quick access to all major features of the bot.

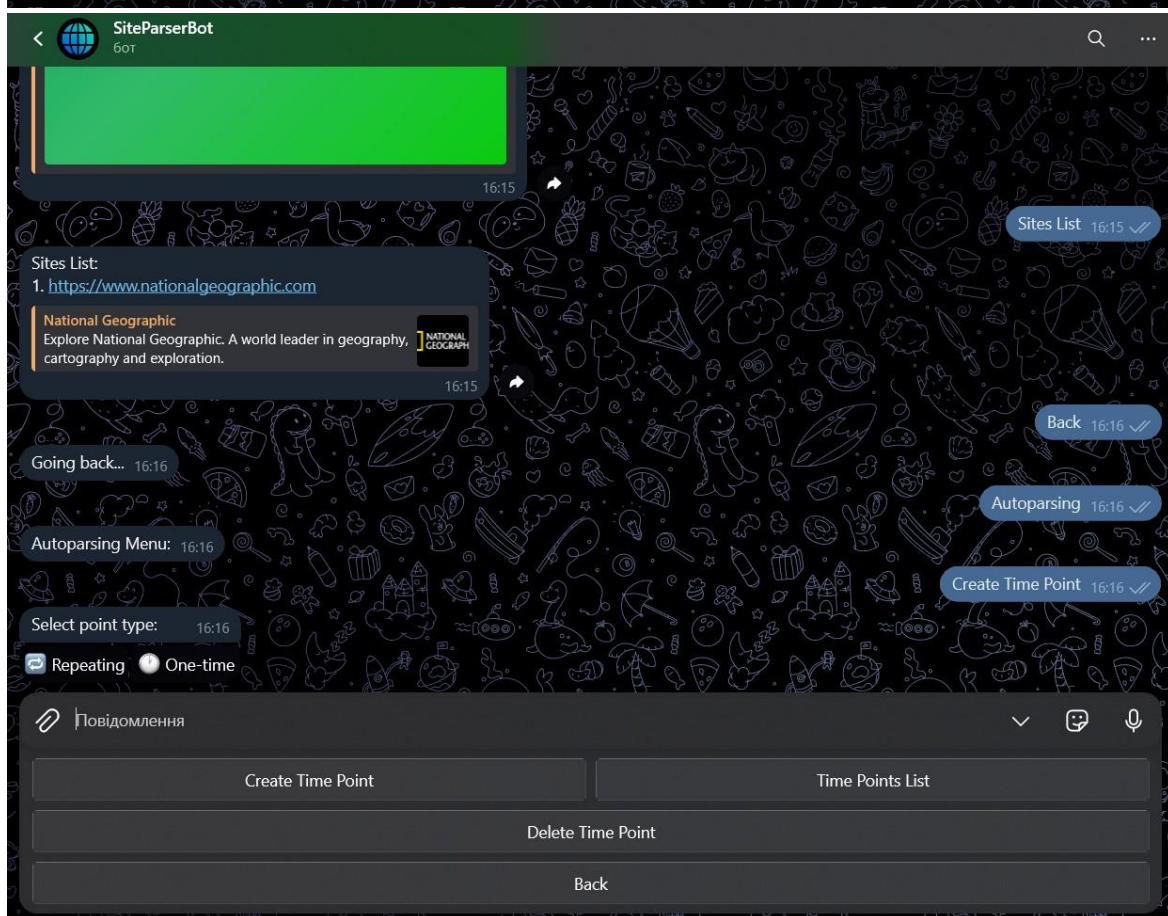

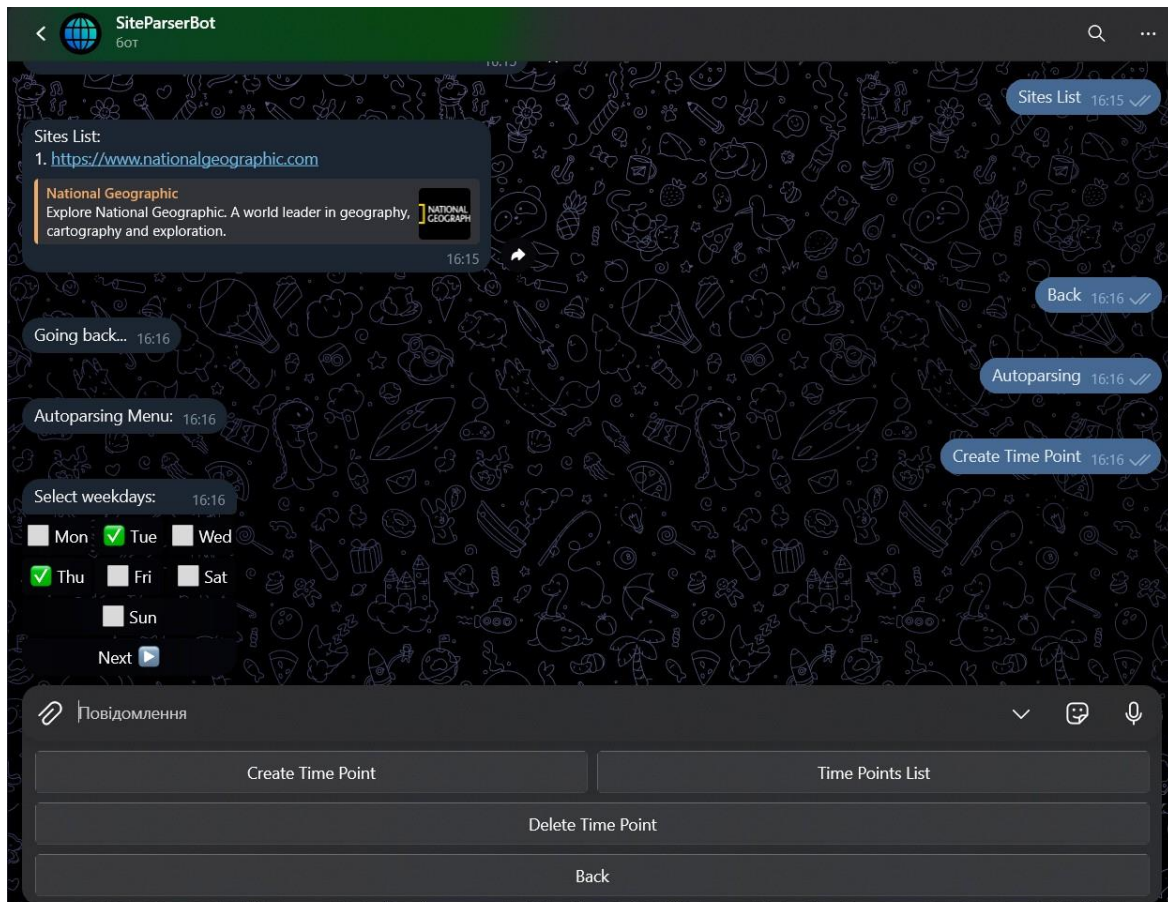

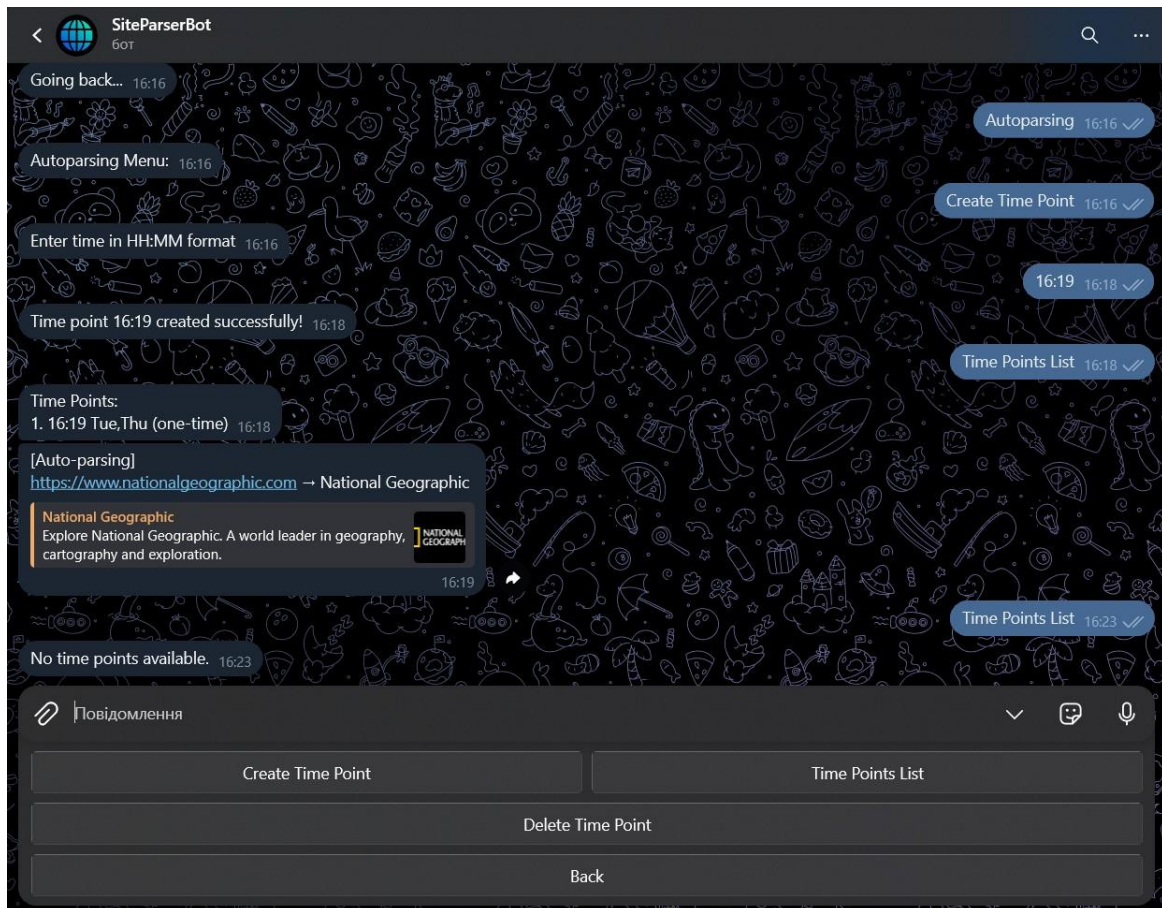

Parsing Menu

This menu allows users to manage the list of websites and prepare them for parsing:

- **Add Site** – Add one or multiple websites by entering URLs separated with commas.
- **Sites List** – Display the full list of currently saved websites.
- **Delete Site** – Remove one or multiple websites by entering their numbers (as shown in the list), separated by commas.
- **Parse** – Opens a small panel with checkboxes next to each saved site. Selected sites will be used during parsing.
- **Back** – Returns to the main menu.

This section provides users with full control over which sites they want to track and parse.

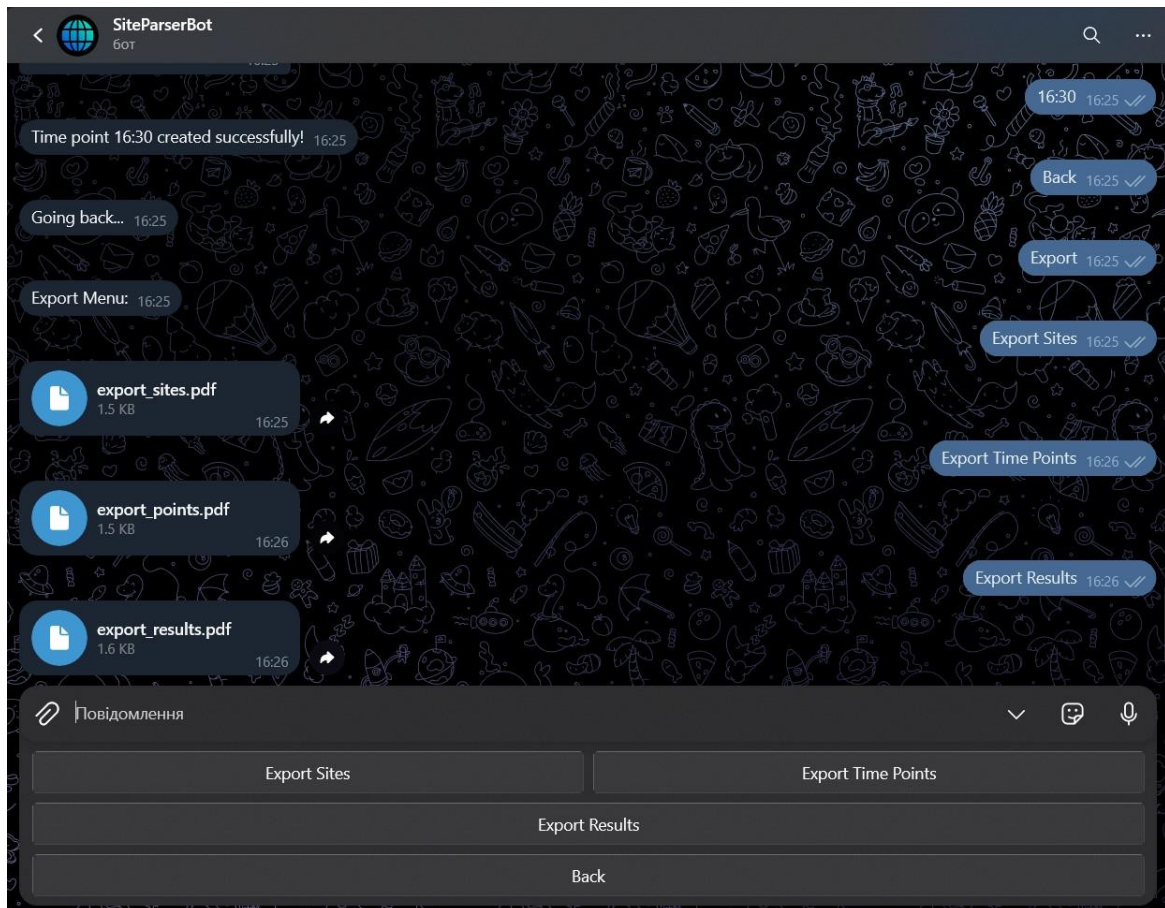

Auto-parsing Menu

This section allows users to schedule automatic parsing based on selected days and time:

- **Create Time Point** – Starts by displaying a panel with checkboxes for selecting one or more days of the week. Then, the user chooses whether the point is one-time or recurring. One-time points delete themselves after execution.
- **Time Points List** – Shows all saved time points with their scheduled time, selected days, and repeat status.
- **Delete Time Point** – Displays the numbered list of all time points. You can delete multiple entries by typing their numbers separated by commas.
- **Back** – Returns to the main menu.

Note: Auto-parsing only processes the websites that were selected in the regular parsing menu. This gives users fine-grained control over what gets parsed and when.

List of Sites for Parsing

Auto-parsing Time Points

16:30 — Tue (repeating)

Parsing Results

[2025-05-13 16:14] <https://www.nationalgeographic.com> → National Geographic

[2025-05-13 16:19] <https://www.nationalgeographic.com> → National Geographic

Export Menu

This section allows users to export their data in PDF format for convenient viewing or sharing:

- **Export Sites** – Generates a PDF file containing a list of all added websites.
- **Export Time Points** – Creates a PDF with all configured auto-parsing time points, including their schedule and repeat status.
- **Export Results** – Exports the saved parsing results (URL and parsed titles) to a cleanly formatted PDF file.
- **Back** – Returns to the main menu.

All exported files are generated in PDF format to ensure portability and a readable layout.
